Ceramic Carbon Polymeric Coating

Your vehicle is a significant investment and expression of yourself. Protect it with a superior performance product.

- Aviation Grade, originated in Aviation Industry
- In use, safe for adults, children and pets
- Environmentally Friendly, Hypergreen
- Safe on all surfaces - Won’t yellow or discolor
- Resistant to Extreme Temperatures up to 700F
- Resistant to Acid, unlike Teflon and Silicon coatings
- Reduces Car Washes and Saves Time
- Adds Flexibility to paint and clear coat

Increases Exterior Surface Protection and reduces damage from environmental hazards!

Superior Resistance from damage caused by oxidation, hard water etching, chrome water spotting, insects (including love bugs), tree sap, accidental paint over spray, road de-icing agents, road salt, acid rain, industrial fallout, and weather induced fading. Is anti-static, repels dirt and test proven to reduce washings by 50%. Withstands up to 60 wash cycles without degradation. Effective in both hot and cold climates! Reduces de-icing time.

Covalently Bonds to the external painted surfaces of your vehicle providing an advanced protection barrier using our revolutionary ceramic carbon polymeric coating producing a clear, hard, smooth and mirror like surface. Safe on all surfaces, including clear coats and will not yellow or discolor.

Provides Additional Protection and durability to the exterior paint surfaces to maintain that new car showroom look, wash after wash for years.

Easy to Apply. Follow simple directions (refer to application instructions) and you will have an invisible barrier of protection that will reduce friction and protect the surface beneath from chemical interaction, road and environmental hazards.

Fastest Certified Application on the market: APPLY BY HAND in 20 to 25 minutes. APPLY WITH ATOMIZER in just 5 to 10 minutes.
Frequently Asked Questions

Where does Xzilon Exterior Protection come from?
Exterior Protection is a ceramic carbon polymeric composite coating developed at Dow Corning Technology for the Aerospace Industry. This nano technology material has properties comprised of both glass and polycrystalline with a range of useful properties, including very high hardness and strength. Exterior Protection has a high resistance to high temperatures, and both harsh and corrosive environments. Our formula offers a protective, glossy layer of carbide like matrices on the vehicle’s finish with a very strong cross-linked covalent bond just like super glue. This covalent bond forms a carbide-like membrane of protection and enhancement over the vehicle by covalently bonding to the finish and will not breakdown or leave from the surface. The result is a protective coating that seals out oxidative elements such as acid rain, bugs, tree sap, bird drops, road salt and more, and seals in a deep gloss shine.

Is Xzilon Exterior Protection Safe?
In use, it is completely safe for children, adults and pets. It does not wear off the surface and is made with Hyper-green technology.

Why should I use Xzilon Exterior Protection?
To create a semi-permanent barrier between your paint and the outside world. Years ago, when lead was removed from auto paint, the paint lost softness, flexibility and luster. The powder coated paint used today is a fraction of the thickness that paint used to be! Using Exterior Protection adds back the softness, flexibility and luster so when dents do occur, (much less frequent with Exterior Protection applied) they can be repaired more easily without chips. It gives the paint flexibility and durability.

Exterior Protection Provides long term protection on treated surfaces, shielding your vehicle from degrading.
It leaves an anti-static finish which repels dirt, dust and pollen and almost self-cleans!

Exterior Protection Reduces car washes by over 50% and most corrosive elements can be simply rinsed off. Enjoy a higher resale value – 15% to 20% higher price for treated cars. On a $60,000 investment, that’s a gain of $12,000.
Protect your car against scratches, dings, dents, bird drops, acid rain, exhaust, UV light, sand, grit, and other types of wear and tear.

Where is Xzilon Exterior Protection used?
Boeing Aviation, Gulf Stream Aviation, Wind Turbine Industry
Emergency Vehicles Worldwide (REV Ambulance Group, Police, bay stations) Delta Airlines, NetJets, private jets Auto racing (Indy car series for air drag)
Boat and Yacht racing – Americas cup (water drag)
Ballistic armored vests
Dubai Taxis, car hires, and currently being tested on building exteriors in Dubai, many of which have smooth, painted and glass surfaces and a high probability of sustaining abrasions due to high humidity and sand storms. You may remember the fire at the Burj Khalifa luxury hotel in Dubai on New Year’s Eve, 2016. XZilon Technology was used at that hotel.
