

RV Carbon Ceramic Exterior Paint Protection

Your Recreational Vehicle is a significant investment and expression of yourself. **Protect it with our superior performance protection product.**

Years ago, when **lead was removed** from vehicle paint, the paint lost softness, flexibility, and luster. The powder-coated paint used today is a **fraction of the thickness** that paint used to be! This leaves your customers' vehicles more **vulnerable** than ever before.

Our Carbon Ceramic Exterior Paint Protection **adds** back the **softness, flexibility, and durability** that lead used to provide while also leaving a finish with **luster**. That's why environmental damage is less frequent when our coating has been applied.

- Aviation Grade; originally developed for the aerospace industry
- Highest safety rating
- Environmentally friendly product that is VOC free
- Safe on all surfaces - won't yellow or discolor
- Resistant to extreme temperatures, up to 700F
- Resistant to acid, common in many environmental hazards
- Reduces the need for washes and eliminates the need to wax
- Adds flexibility to the clear coat

Enhances Exterior Surface strength and flexibility to protect against damage due to environmental hazards.

Superior Resistance from hard water spotting, bug damage, tree sap, UV fading, road salt, industrial fallout, acid rain, and more. Xzilon is anti-static, repels dirt, is proven to reduce the need for washings, and is effective in both hot and cold climates!

Covalently Bonds to the external painted surfaces of your RV providing an advanced protection barrier using our revolutionary aviation-grade carbon ceramic polymeric coating; producing a harder, stronger, more flexible surface with more depth and shine. Safe on all surfaces, including headlights, taillights, and black plastics. Won't yellow or discolor.

Protects Your Investment in the appearance of your RV, adding superior durability to the exterior painted surfaces to maintain that new RV showroom look, wash after wash, for years.

Easy To Apply By following simple directions, you will have an invisible barrier of protection in just minutes that will reduce friction and protect the surface beneath from chemical interaction and environmental hazards.

Apply by hand in 1-2 hours. Apply with atomizer in just 20 to 35 minutes.

RV Carbon Ceramic Exterior Paint Protection

Frequently Asked Questions

Where Does Xzilon Exterior Technology Come From?

Xzilon is a boron ceramic carbon composite polymeric coating developed by Dr. Curtis White (formerly of Dow Corning) for the Aerospace Industry. This nanotechnology material has properties comprised of both glass and polycrystalline with a range of useful properties, including high hardness and strength. Xzilon has a high resistance to high temperatures, in both harsh and corrosive environments. Our formula offers a protective, glossy layer of carbide-like matrices on the vehicle's finish with a very strong cross-linked covalent bond, similar to super glue. This covalent bond forms a carbide-like membrane of protection and enhancement over the RV by chemically adhering to the finish on a molecular level, and will not break down or leave from the surface. The result is a protective coating that seals out oxidative elements such as acid rain, bugs, tree sap, bird droppings, road salt, and much more, and also seals in a deep, glossy shine.

Is Xzilon Exterior Safe?

Xzilon is non-toxic and carries the industry's highest safety rating. Unlike consumer-grade and wax-based products, Xzilon technology does not simply wear off the surface after application. Contains no VOCs (volatile organic compounds) or CFCs (chlorofluorocarbons).

Why Should I Use Xzilon Exterior Protection?

To create a semi-permanent barrier between your RV's paint and the elements of the outside world. Years ago, when lead was removed from automotive and RV paint, the paint lost softness, flexibility, and luster. The powder-coated paint used today is a fraction of the thickness that paint used to be! Xzilon's technology adds back the softness, flexibility, and luster so when something does happen to your vehicle's exterior, it can be repaired much more easily, and often without any chipping. Xzilon technology provides long-term protection on treated surfaces, shielding your RV from degrading. It leaves an anti-static finish which repels dirt, dust and pollen, and reduces washings by over 50%! Most corrosive elements can be simply rinsed off. Enjoy a higher resale value - up to 15% to 20% higher prices when reselling a treated RV vs a non-treated RV. On a \$100,000 investment, that could mean a gain of up to \$20,000. Protect your RV against hard water spotting, bug damage, tree sap, UV fading, road salt, industrial fallout, acid rain, and more.

Where Is Xzilon Exterior Protection Used?

Boeing Aviation, Gulf Stream Aviation, Wind Turbine Industry

Emergency Vehicles worldwide

Private jets

Boat and Yacht Racing - America's Cup (for water drag)

Ballistic Armored Vests

Taxis, Police vehicles, and Building Exteriors in Dubai, which are subject to high heat, humidity, and sustaining sand abrasion

Thousands of auto dealerships nationwide!
