

**Diamond Grade Ceramic  
Paint Protection**

## **Diamond Grade Ceramic Coating**

*Powered by a **Dow Corning Technology***

THE **TOUGHEST** COATING

THE **DEEPEST** FINISH

***Formulated for those keen on keeping their specialty automobiles in top shape.***

- Hardest compound - 9H rating
- Highest heat resistance - 700F
- Longest lasting formula - 7 years
- Oleophobic & Hydrophobic
- Repels mud & water, easily rinsed off
- Deters snow & ice
- Greatly reduces the need to polish
- Applied to all painted surfaces for maximum protection
- Protects against etching caused by tree sap, hard water, road salt, acid rain, bug guts, industrial fallout, UV radiation, and much more!
- Warranty coverage up to 7 years!

## Diamond Grade Ceramic Paint Protection

### Frequently Asked Questions

#### Where does Xzilon Diamond Grade Ceramic Paint Protection Technology come from?

Xzilon is a boron ceramic carbon composite polymeric coating developed by Dr. Curtis White (formerly of Dow Corning) for the Aerospace Industry. This nanotechnology material has properties comprised of both glass and polycrystalline with a range of useful properties, including high hardness and strength. This exterior protection has a high resistance to high temperatures, and both harsh and corrosive environments. Our Diamond Grade solution offers an even more protective, glossy layer of carbide-like matrices on the vehicle's finish with a very strong cross-linked covalent bond, similar to super glue. This covalent bond forms a carbide-like membrane of protection and enhancement over the vehicle by chemically adhering to the finish on a molecular level, and will not break down or leave from the surface. The result is a thicker, protective coating that seals out oxidative elements such as acid rain, bugs, tree sap, bird droppings, road salt, and much more, while also sealing in a deep, glossy shine.

#### Is Xzilon Diamond Grade Ceramic Paint Protection safe?

Xzilon Diamond Grade Ceramic Coating is - in use - completely safe for adults, children, and pets. Unlike consumer-grade products, Xzilon technology safely bonds to your vehicle's exterior and does not wear off the surface after application.

#### Why should I use Xzilon Diamond Grade Ceramic Paint Protection?

To create a semi-permanent barrier between your vehicle's paint and the elements of the outside world. Years ago, when lead was removed from automotive paint, the paint lost softness, flexibility, and luster. The powder-coated paint used today is a fraction of the thickness that paint used to be! Xzilon's technology adds back the softness, flexibility, and luster so when something does happen to your vehicle's exterior, it can be repaired much more easily, and often without any chipping. Xzilon technology provides long-term protection on treated surfaces, shielding your vehicle from degrading. It leaves an anti-static finish which repels dirt, dust and pollen, and reduces washings by over 50%! Most corrosive elements can be simply rinsed off. Enjoy a higher resale value - up to 15% to 20% higher prices when reselling a treated vehicle vs a non-treated vehicle. On a \$60,000 investment, that could mean a gain of \$12,000. Protect your car against hard water spotting, bug damage, tree sap, UV fading, road salt, industrial fallout, acid rain, and more.

#### Where is Xzilon used?

Boeing Aviation, Gulf Stream Aviation, Wind Turbine Industry  
Emergency Vehicles worldwide (REV Ambulance Group, Police, Bay Stations)  
Delta Airlines, NetJets, private jets  
Boat and Yacht Racing - America's Cup (for water drag)  
Ballistic Armored Vests  
Taxi's and Building Exteriors in Dubai, which are subject to high heat, humidity, and sustaining sand abrasion.
