

Carbon Polymeric Coating

Your vehicle is a significant investment and expression of yourself. Protect it with a superior performance protection product.

- Most dents can be repaired without paint damage
- Aviation Grade
- Industry's highest safety rating
- Environmentally Friendly, Hypergreen
- Safe on all Surfaces - Won't yellow or discolor
- Resistant to Extreme Temperatures up to 700°F
- Durable coating, will last for years on treated surfaces
- Adds flexibility and luster to paint and clear coat

Increases Exterior Dent Surface Protection and reduces damage from environmental hazards!

Superior Resistance that helps prevent paint damage when dents occur accommodating paint-less dent repair. It is anti-static, repels dirt and test proven to reduce washings by 50%. Effective in both hot and cold climates!

Covalently Bonds to the external painted surfaces of your vehicle providing an advanced protection barrier using our revolutionary ceramic carbon polymeric coating producing a clear, hard, smooth, and mirror-like surface. Safe on all surfaces, including clear coats and won't yellow or discolor.

Provides Additional Protection and durability to the exterior paint surfaces to maintain that new car showroom look, wash after wash for years.

Easy to Apply. Follow simple directions (refer to application instructions) and you will have an invisible barrier of protection that will reduce friction and protect the surface beneath from chemical interaction, and road and environmental hazards.

Fastest Certified Application on the market. Apply by hand in 20 to 25 minutes. Apply with atomizer in just 5 to 10 minutes.

Frequently Asked Questions

Where Does Xzilon Exterior Dent Protection Come From?

Xzilon Exterior Dent Protection is a boron ceramic carbon composite polymeric coating developed by Dr. Curtis White (formerly of Dow Corning) for the Aerospace Industry. This nanotechnology material has properties comprised of both glass and polycrystalline with a range of useful properties, including high hardness and strength. Exterior Dent Protection has a high resistance to high temperatures, in both harsh and corrosive environments. Our formula offers a protective, glossy layer of carbide-like matrices on the vehicle's finish with a very strong cross-linked covalent bond just like super glue. This covalent bond forms a carbide-like membrane of protection and enhancement over the vehicle by chemically adhering to the finish on a molecular level, and will not break down or leave from the surface. The result is a protective coating that seals out oxidative elements such as acid rain, bugs, tree sap, bird droppings, road salt, and much more, and also seals in a deep, glossy shine.

Is Xzilon Exterior Dent Protection Safe?

Xzilon is non-toxic and carries the industry's highest safety rating. Unlike consumer-grade and wax-based products, Xzilon technology does not simply wear off the surface after application. Contains no VOCs (volatile organic compounds) or CFCs (chlorofluorocarbons).

Why Should I Use Xzilon Exterior Dent Protection?

To create a semi-permanent barrier between your paint and the outside world. Years ago, when lead was removed from auto paint, the paint lost softness, flexibility, and luster. The powder coating paint used today is a fraction of the thickness that paint used to be! Using Exterior Dent Protection adds back the softness, flexibility, and luster so when dents do occur, (much less frequent with Exterior Dent Protectant applied) they can be repaired more easily without chips in the paint. It gives the paint flexibility and durability. Exterior Dent Protectant provides long-term protection on treated surfaces, shielding your vehicle from degrading. It leaves an anti-static finish which repels dirt, dust, and pollen. Exterior Dent Protectant reduces car washes by over 50% and most corrosive elements can be simply rinsed off. Enjoy a higher resale value - 15% to 20% higher price for treated cars.

Where Is Xzilon Dent Protection Technology Used?

Boeing Aviation, Gulf Stream Aviation, Wind Turbine Industry
Emergency Vehicles Worldwide (REV Ambulance Group, Police, bay stations)
Delta Airlines, NetJets, private jets
Auto racing (Indy car series for air drag)
Boat and yacht racing - America's Cup (water drag)
Ballistic armored vests
Dubai Taxis, car hires, and currently being tested on building exteriors in Dubai, many of which have smooth, painted, and glass surfaces and a high probability of sustaining abrasions due to high humidity and sand storms.
